

Timothy Khumpan

A user would be able to create a post and that post has an img and some information. A user is also able to click on the images and have it pop up.

[https://www.w3schools.com/howto/howto\\_css\\_modal\\_images.asp](https://www.w3schools.com/howto/howto_css_modal_images.asp)

Essentially the component would be a card/post that is created from an array of objects

More complexity: if there are many pictures for a singular post, I can create a left arrow and right arrow to cycle through the photos
